

BenQ PG Series Monitors Tame Soft Proofing Once and for All

BenQ ProGraphi Series
Color Management Monitors

BenQ PG Series Color Management Monitors

Color proofing does not have to be a beast of a job. The strict color quality expectations of art, design, photography and print-making professionals are a constant challenge for printers. As a result, quality and accuracy are necessary to efficiently manage the proofing process.

Traditionally, soft and hard proofing have been standard steps in the color proofing process. But with better technology available, some projects are being produced with soft proofing alone. BenQ understands that monitor color accuracy is the key factor in reliable soft proofing.

BenQ tests its monitors against standard printing color charts and real printing house results to explore which aspects of coloration are the most challenging – including tones with high Delta E values. Among professional color monitors, BenQ PG series monitors stand out for their color reproduction, with Delta E lower than two.

Printing-certified BenQ PG series monitors will help you tame soft proofing with dependable results. You will hear the roar of approval print after print.

Guaranteed Display Accuracy

Certified Print-Quality Display

BenQ PG series monitors are Printing-Industry Color Certified (G7/others) according to international ISO standards that improve design and proofing efficiency and lower total cost of ownership. On-screen images have never been so true to the final printed image. Finally, a monitor series that is print-perfect.

Factory Calibration Report

Included with each BenQ PG series monitor is a detailed verification conducted on site on each individual monitor. The report validates the performance of the monitor in terms of Brightness uniformity, Delta E and Gamma curve. You can trust the color right out of the box.

Accurate Colors

Excellent Adobe RGB and CMYK Coverage

BenQ PG series monitors cover 100% CMYK color space and 99% Adobe RGB color space, ensuring that the truest red roses, blue skies and green grasses can be reproduced with accuracy.

Expand the Spectrum on a 10-bit Panel

Enjoy the smoothest shading and color transitions in natural gradations on a 10-bit display panel. A 10-bit panel can create more than one billion colors – 64 times the amount of color available on an 8-bit panel – to guarantee silky smooth gradation. The PG series also includes 14-bit processing capability, generating crisper definition and improved gray-level distinction, allowing you to see true-to-print natural shades before they get printed.

Accurate Colors

Predictable Colors with 14-bit 3D LUT

With the 14-bit 3D Look Up Table (LUT), monitors can display the most accurate color mixture. 14-bit 3D LUT improves RGB color blending accuracy, resulting in impeccable color and gray tone reproduction.

Pixel-Perfect Color Authenticity

BenQ PG series monitors feature $\Delta E \leq 2$ to ensure color accuracy throughout project workflow. $\Delta E \leq 2$ not only offers viewers the truest impression of the original image, it also saves time and money by creating reliable colors the first time, every time.

BenQ PG Series Monitor

Typical Monitor

Hardware Calibration

With the Hardware Calibration Function, you can adjust the 3D LUT in the monitor directly, providing smoother and more consistent color tones. Keep the image consistent with the original, without being affected by graphic settings.

Brightness Uniformity Function

The Brightness Uniformity Function enables PG series monitors to maintain a consistent image across the entire display. By balancing brightness and chromaticity the Brightness Uniformity Function offers a more consistent viewing experience.

Consistent Brightness

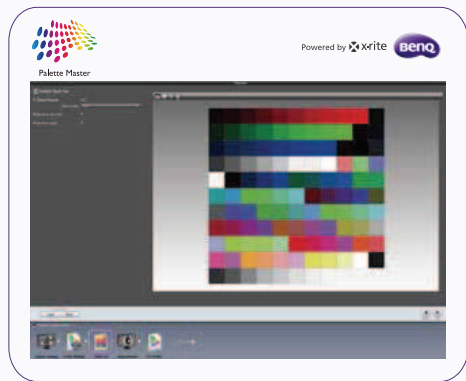

Inconsistent Brightness

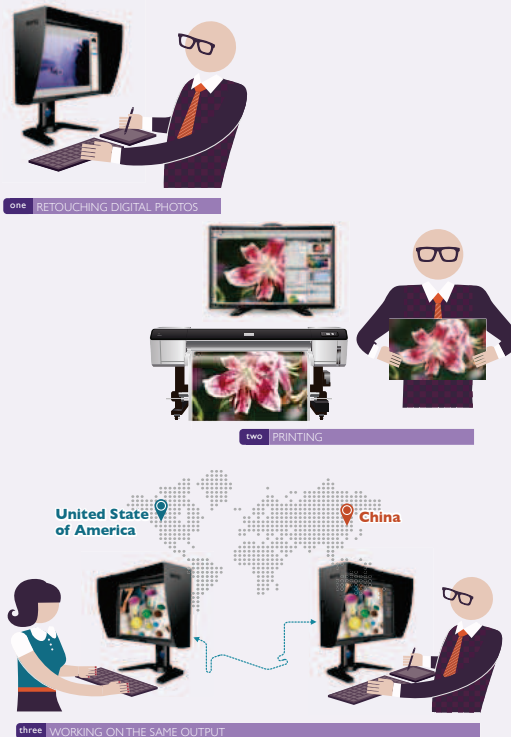

Color Refining Software

Palette Master Mixes Precise Colors

Joint-developed with X-rite, the global leader in color science and technology, Palette master is bundled software that can validate calibration according to G7/others criteria, making it easy to verify for international printing standards. A user-friendly interface and a variety of adjustment parameters make it a snap to set a customized profile for any job.

Using Palette Master calibration utility brings consistency and color accuracy that will always deliver stunning results to your PG series monitor.

User-Friendly Design

Preset Modes

Preset modes – Standard, Adobe RGB, sRGB, Illumin. A, D50, D65 and Eco – make it easy to get a suitable viewing condition for any project. In Calibration Mode, users can save calibration results, saving time when switching between different calibration targets. Custom Mode can be employed for specialized color tuning.

Dynamic Connectivity

A selection of input ports allows users to switch between different input devices swiftly. PC users can connect a PG series monitor to a PC via DVI-D, HDMI or DisplayPort, while Mac users can utilize a Mini Display Port. A USB3.0 port/card reader is also available for easy file transfer.

- (A) AC Switch
- (B) Power
- (C) Headphone Jack
- (D) Mini DisplayPort
- (E) DisplayPort
- (F) DVI-D
- (G) HDMI
- (H) D-Sub
- (I) USB-IN

User-Friendly Design

Ergonomic Design

With a sturdy stand and a wide adjustable range, BenQ PG series monitors with an Ergo Base can satisfy any desktop configuration. Good working ergonomics increases comfort and efficiency by decreasing distraction and fatigue. The On Screen Display can even rotate automatically for landscape or portrait use.

Shading Hood

The shading hood keeps the distracting glare away from the user by creating a bonnet around the display. Reduced glare and ambient light ensure the most accurate color appearance.
